Title : Creating a lambda function in AWS to email daily reports

Aim : Automate Sending Emails at a Specific Time with AWS Lambda, CloudWatch and SES

Pre-requisites : AWS Console, Amazon SES, Amazon Lambda, Amazon CloudWatch.

Procedure :

We are going automate sending email to a person or a group of people. AWS **Cloudwatch** is used to setup a schedule to trigger AWS **Lambda** function and then its going to use AWS **SES (Simple Email Service)** to send out emails to people.

Steps:

1. Go to AWS SES (Simple email service), click on “Create Identity”. Use email address as a type and type the email address.

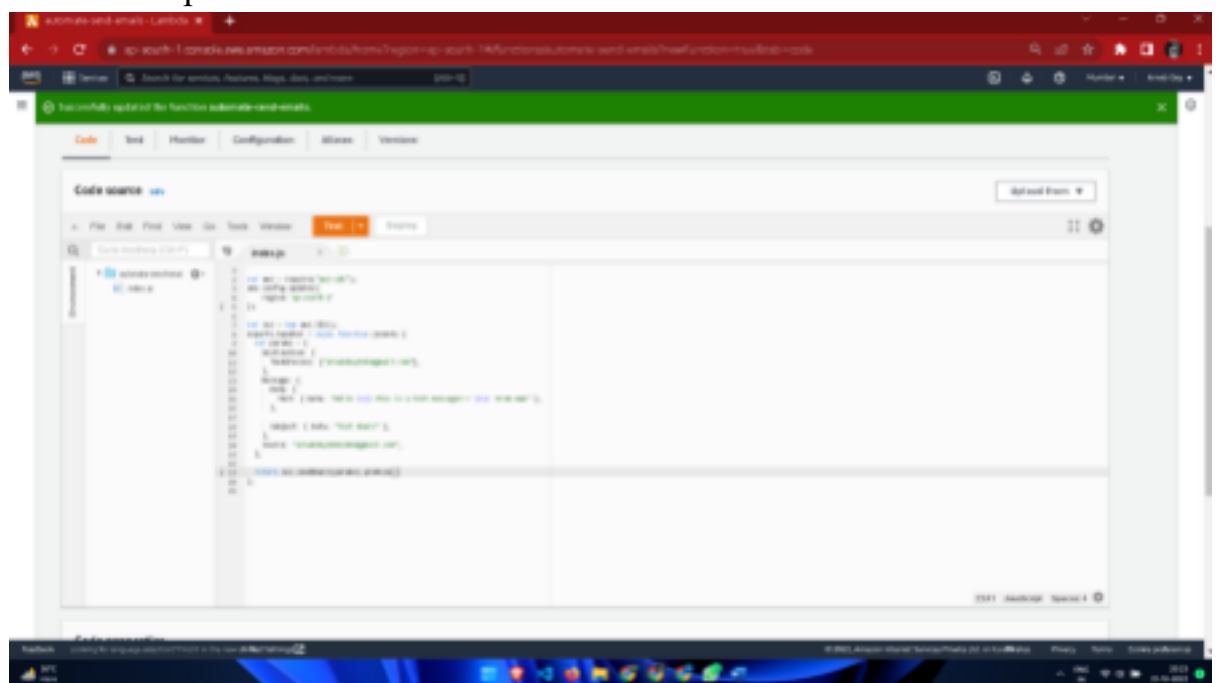

2. Verify the email address that reviewed an email from aws to tell you to verify that.

3. Create two identities (email address).
One for sending emails and another for receiving.
4. Create an IAM role.
Give Use case as lambda and give full access to cloudwatch, SES.
5. Go to Lambda Service, create a lambda function.
Give name, runtime as NodeJS, execution role as created IAM role previously.

The screenshot shows the 'Basic Information' tab for a new Lambda function. The function name is 'automate-send-emails'. The runtime is set to 'Node.js 14.x'. The execution role is 'Lambda_DefaultRole'. The permissions section shows 'Change default execution role' with options to 'Create a new role with basic Lambda permissions', 'Use an existing role', or 'Create a new role from AWS policy templates'. The existing role is 'AWSLambda_DefaultRole'.

6. Use this template for the code:

```
1)
2) var aws = require("aws-sdk");
3) var ses = new aws.SES({ region: "us-west-2" });
4) exports.handler = async function (event) {
5)   var params = {
6)     Destination: {
7)       ToAddresses: ["RecipientEmailAddress"],
```

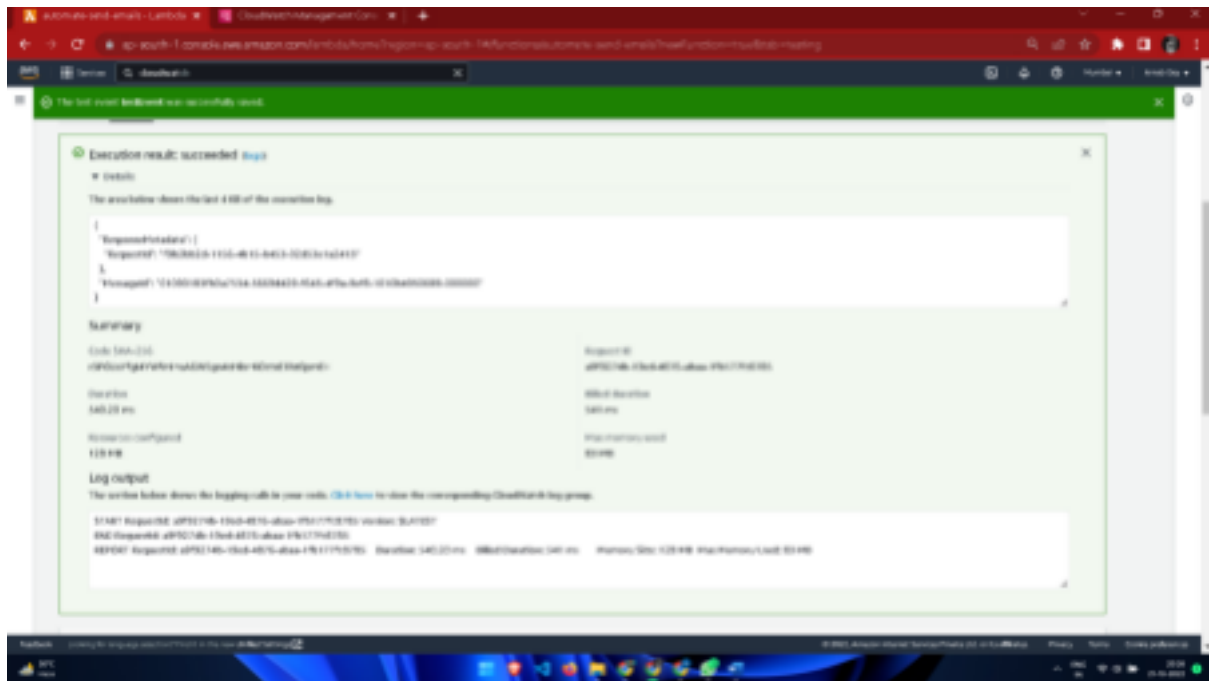

```

8) },
9) Message: {
10) Body: {
11) Text: { Data: "Test" },
12) },
13)
14) Subject: { Data: "Test Email" },
15) },
16) Source: "SourceEmailAddress",
17) };
18)
19) return ses.sendEmail(params).promise()
20) };

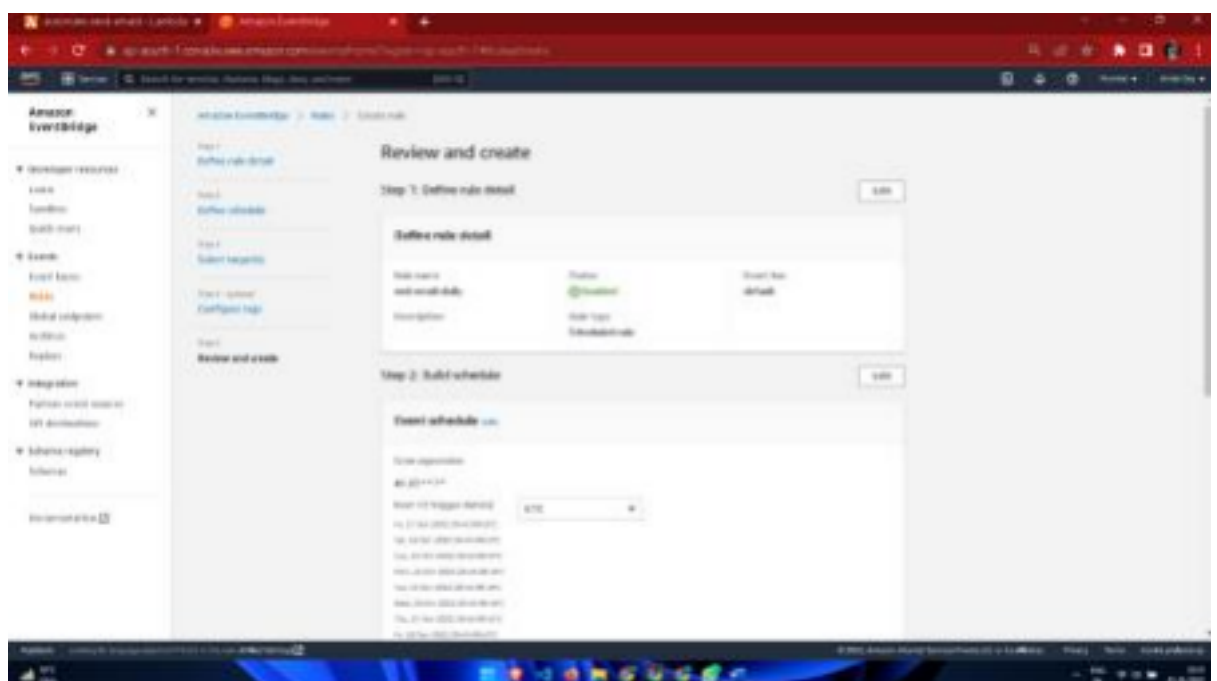

```

7. Click on Deploy and then TEST, you will receive the message in your mentioned emails.

8. For scheduled daily report, go to AWS Cloudwatch , navigate to rule section (now called as eventBridge).

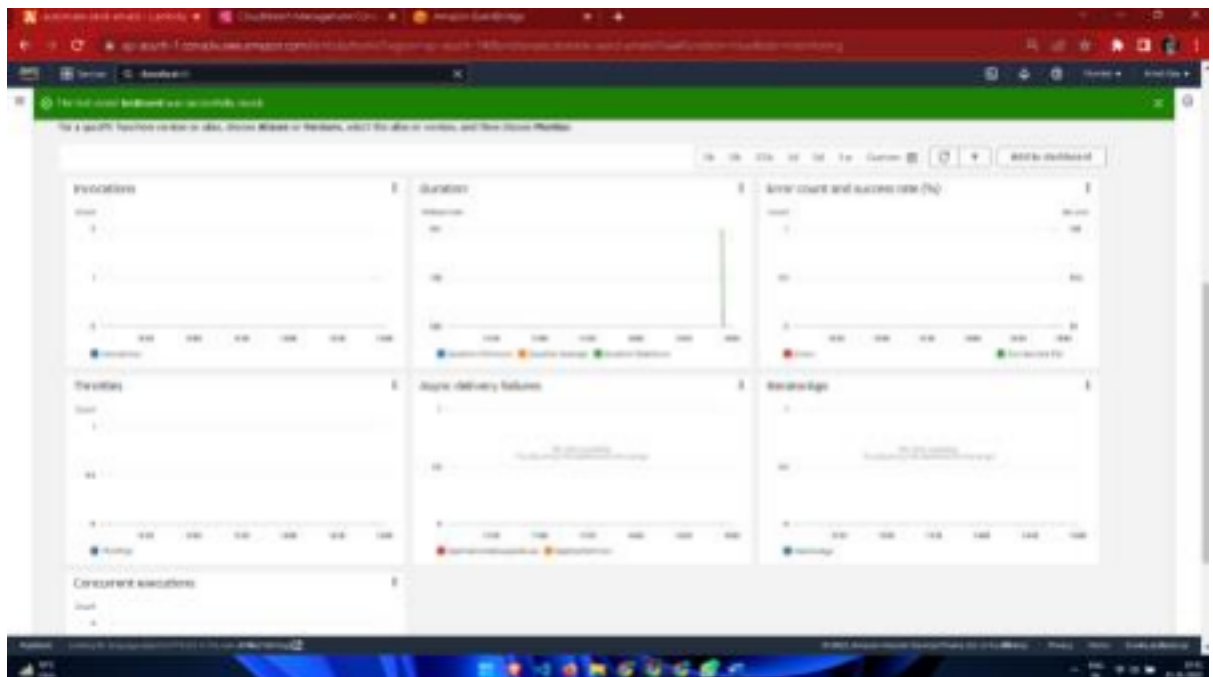

9. Create rule- give name, ruletype- schedule, use cron expression for

schedule pattern .
For e.g. : 15 19 * * ? *

10. Select Targets as lambda function, and use the above defined function. 11. Go to monitoring in Lambda service, click on View logs in cloudWatch and check your mail inbox .

Result:

Hence, the lambda function is created and also implemented using SES, CloudWatch to schedule daily reports.
